WiFi Service Utility

A revolution in product servicing

WiFi Service Utility (WSU) is a portable control interface that plugs directly into the UC8 board on a Temperzone Air Conditioning Unit. It allows you to monitor a wide range of operational parameters, view fault logs and even take control of the unit. It has its own WiFi network built in and the control and diagnostics are done wirelessly from a smartphone, tablet or notebook PC.

- Ideal for comissioning or service diagnosis.

- Screen shots show system status at commissioning or can be emailed at Temperzone for assistance with service diagnosis.

- Works on any device with wireless capability and an internet browser - phone, tablet or notebook PC.

- Allows you to fully control the AC unit.

- Provide a full set of operational parameters.

- You can view a fault log.
